

IWAKI Magnetic drive turbine pumps **MDT** series

Compact size but high pressure of 0.35MPa

MDT Series is plastics made magnetic drive turbine pump. Small flow and high head. Small size but high pressure up to 0.35MPa is available.

No leakage seal-less construction makes it most suitable for being incorporated in equipments such as laser and X ray system cooling and temperature control system etc.

Seal-less construction

Thanks to magnet drive seal-less construction, no liquid leaks and no shaft-seal replacement is required.

High pressure/high vacuum

Small size but high pressure up to 0.35MPa is available. It can be used for negative pressure of suction side because it makes suction pressure up to 8.00kPa.

Non-metal construction

Wet-ends are corrosion resistant materials such as PPS, PEEK, ceramic, carbon. It can handle various chemicals such as acid and alkaline solutions because no metal is used.

Compact design

Ideal for incorporation in equipment and apparatus because it is small size and compact design.
